

Best Places to Survive a Nuclear Apocalypse?

This map was created using data from FEMA and the National Resources Defense Council.

The 2,000-warhead attack assumes a first strike by the Russians. The 500-warhead attack would be a retaliatory strike in the event the United States launched first, thus limiting the Russian arsenal.

Looking at the map, one might have some luck camping at the Indiana Dunes National Lakeshore and then sailing up Lake Michigan to the Upper Peninsula.

Somehow making a journey to Idaho in the post-nuclear apocalypse might be a good option as well.
